AI-Powered Resume Screening System

Developed by: Himanshu Srivastava

1. Introduction

The AI-Powered Resume Screening System is an Agentic AI-based recruitment automation solution designed to streamline the candidate screening process. The system automatically analyzes resumes, evaluates candidate suitability against predefined job requirements, generates match scores, classifies candidates, and sends automated email notifications.

The solution reduces manual screening effort, improves consistency in candidate evaluation, and accelerates the recruitment process.

2. Objectives

The primary objectives of the system are:

- Automate resume screening and candidate evaluation.
 - Reduce manual effort involved in recruitment.
 - Generate AI-driven candidate match scores.
 - Shortlist suitable candidates automatically.
 - Provide automated candidate communication.
 - Maintain centralized candidate records.
-

3. Prerequisites

Before using the application, ensure the following:

User Requirements

- Stable internet connection.
- Modern web browser (Chrome, Edge, Firefox).
- Valid email address.

- Resume in PDF format.

System Requirements

- Public Form URL access.
- Active n8n Cloud deployment.
- Google Sheets integration.
- Gmail integration for notifications.
- Google Gemini API integration.

Technology Stack

- n8n Cloud
 - Google Gemini
 - Google Sheets
 - Gmail
 - Calendly
 - Google Meet
-

4. System Architecture Overview

The application consists of the following components:

1. Public Resume Submission Form
2. Resume PDF Extraction Module
3. Resume Evaluation Agent
4. Candidate Scoring Agent
5. Google Sheets Database
6. Email Notification Module

Workflow:

Candidate Submission → Resume Extraction → Resume Evaluation Agent → Scoring Agent →
Candidate Classification → Google Sheets Storage → Email Notification

5. Accessing the Application

Step 1

Open the Public Resume Submission Form URL.

Step 2

Enter the required information:

- Candidate Name
- Email Address

Step 3

Upload the resume in PDF format.

Step 4

Click the Submit button.

The application will automatically initiate the screening workflow.

6. Resume Screening Process

After submission, the system performs the following actions:

Resume Extraction

- Extracts content from uploaded PDF resumes.
- Converts unstructured resume data into processable text.

Resume Evaluation Agent

The AI Resume Evaluation Agent:

- Extracts candidate skills.
- Reviews professional experience.
- Evaluates educational qualifications.
- Compares the profile against job requirements.
- Generates a structured assessment.

Candidate Scoring Agent

The AI Scoring Agent:

- Calculates candidate match score.
 - Evaluates suitability for the role.
 - Assigns candidate status.
 - Generates hiring recommendations.
-

7. Candidate Classification Logic

Candidates are classified into the following categories:

Strong Match

Score $\geq 90\%$

Characteristics:

- Excellent alignment with job requirements.
- Highly recommended for interview.

Shortlisted

Score between 60% and 89%

Characteristics:

- Meets most job requirements.
- Suitable for further evaluation.

Rejected

Score $< 60\%$

Characteristics:

- Limited alignment with job requirements.
 - Not recommended for the current opportunity.
-

8. Email Notification Process

The system automatically sends email notifications based on the candidate's evaluation result.

Shortlisted / Strong Match Candidates

Receive:

- Interview invitation email.
- Shortlisted candidates receive a Calendly interview scheduling link and Google Meet interview details.

Rejected Candidates

Receive:

- Professional application status update.
- Appreciation for application submission.

The candidate's email address is dynamically captured from the submitted form.

9. Candidate Tracking

All candidate information is automatically stored in Google Sheets.

Stored information includes:

- Candidate Name
- Email Address
- Match Score
- Candidate Status
- Evaluation Summary
- Submission Timestamp

This enables centralized recruitment tracking and reporting.

10. Key Features

- Public web-based resume submission.
 - AI-powered resume analysis.
 - Automated candidate scoring.
 - Intelligent shortlisting.
 - Automated email communication.
 - Google Sheets integration.
 - Cloud deployment using n8n.
-

11. Troubleshooting

Issue: Resume Upload Fails

Resolution:

- Verify that the resume is in PDF format.
- Ensure file size is within acceptable limits.

Issue: Email Not Received

Resolution:

- Verify the email address entered in the form.
- Check Spam/Junk folders.

Issue: Form Submission Error

Resolution:

- Refresh the page.
- Verify internet connectivity.
- Re-submit the form.

Issue: Processing Delay

Resolution:

- Wait a few moments for AI evaluation to complete.
 - Refresh the tracking sheet if required.
-

12. Limitations

- Supports PDF resumes only.
 - Candidate evaluation depends on resume quality and content.
 - AI-generated scores should be considered as recommendations.
 - Internet connectivity is required for operation.
-

13. Future Enhancements

- ATS Integration
 - Multi-role Screening
 - Candidate Ranking Dashboard
 - AI-generated Interview Questions
 - Power BI Reporting Dashboard
 - Multi-language Resume Screening
-

14. Conclusion

The AI-Powered Resume Screening & Interview Scheduling System successfully automates candidate evaluation, scoring, shortlisting, and communication through Agentic AI and workflow automation. The solution improves recruitment efficiency, reduces manual effort, and provides a scalable cloud-based hiring workflow.
